Givaudan launches Customer Foresight futurescaping platform
Harnessing human intelligence, artificial intelligence (AI) and comprehensive, forward looking data to better anticipate and shape the future of food

As an important part of its 2025 digital strategy, today Givaudan is launching Customer Foresight. This exclusive, proprietary futurescaping platform, built in-house at Givaudan’s Digital Factory in Paris, France, leverages Givaudan’s human expertise, big data and AI to anticipate tomorrow’s challenges, foresee consumer expectations, and create winning food experiences.

Customer Foresight is an industry first, able to identify early indications about impending, future shifts that will impact the food and beverage industry. It is designed to support customers in understanding, planning for and addressing disruptive changes in consumer desires, guiding strategic planning, and leading to co-creation opportunities. As it becomes smarter through AI, Customer Foresight will have the ability to anticipate what’s next a decade from now — or beyond.

Louie D’Amico, President Taste & Wellbeing, Givaudan said: “We’re dedicated to helping our customers understand and unravel the complexities of consumers’ evolving needs and expectations. I’m truly excited about the limitless applications and use-cases that Customer Foresight will provide. Our experts are able to gain insight and foresight into any future food or beverage opportunity. Their resulting foresights can include anything from customisable and transversal future scenarios, to visualised target personas brought to life virtually.”

The Company announced its development of Customer Foresight during the first half of 2022 and has been working with a select group of customers in different markets testing it from end-to-end. The powerful results from the pilot led to forward-thinking, new experience concepts based on data-driven foresights and futurescaping prowess.

Customer Foresight has now been rolled out within Givaudan globally for selective use on key opportunities that meet certain thresholds. Givaudan’s exclusive AI enabled capability will continue to evolve through data enrichment and deep learning to create unique and disruptive innovations as it anticipates what is to come in the years ahead.
